

Figure 1 consists of four scatter plots arranged in a 2x2 grid. The top row shows the relationship between the total number of children and the number of children who are not in school. The bottom row shows the relationship between the number of children who are not in school and the number of children who are not in school. The left column shows the relationship for the total number of children, and the right column shows the relationship for the number of children who are not in school. The plots show a positive correlation between the number of children and the number of children who are not in school, with the correlation being stronger for the total number of children than for the number of children who are not in school.

1. *Staphylococcus aureus* (10⁸ CFU/ml) was grown in 100 ml of TSB medium containing 100 µg/ml penicillin, 100 µg/ml streptomycin, and 100 µg/ml nystatin. Cells were harvested by centrifugation at 5000g for 10 min and washed with distilled water. Cells were then resuspended in 100 µl of distilled water and sonicated for 10 min. The cell debris was removed by centrifugation at 1000g for 10 min. The supernatant was then filtered through a 0.22 µm filter and stored at -20°C.

[illegible]

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28 °C. The cell concentration of the strains was adjusted to 10⁸ cells/ml. The cell suspension was mixed with the plant tissue and incubated for 24 h at 28 °C. The plant tissue was then cultured on the selective medium. The transformation efficiency was determined as the number of transformants per 100 mg of plant tissue. The data are the mean ± SD of three independent experiments. The asterisk indicates a significant difference (*p* < 0.05) between the control and the treatment.

Figure 6

Panel A shows a bar chart of the number of cases by age group (0-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70-74, 75-79, 80-84, 85-89, 90-94, 95-99) and sex (Male, Female). The y-axis ranges from 0 to 100. Panel B shows a bar chart of the number of cases by age group (0-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70-74, 75-79, 80-84, 85-89, 90-94, 95-99) and sex (Male, Female). The y-axis ranges from 0 to 100.

Abstract

[illegible]

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups.
